

# Soviet Education

By Kasimar Chelokov

## I. Education and its Fundamental Meaning

Education opens you to the world of sciences and then we are educated and know the world of science.

## II. Elementary Education in Sciences – remembering this when older and in College

In fact it is then changed to college where I am a historian against Chemistry at all – my

mind is advanced in history and forgets Chemistry at all.

### III. Unionising the Sciences – how one should remember education

In fact history goes with physics and physics is hard facts such things are open to discussion.

### IV. Soviet Education (1950 – 1990)

We meant just develop a college structure of philosophy for Slavoj Žižek and such people – but also remember science in it – that we can also just shift the position to the CPSU which is busy uniting

all the disciplines and respecting the sciences in union – tell me how we are – Soviet people are scientific but also interested in engineering, also one day into commerce and stock markets one day interested in politics alone – we are just Soviet by nature – we are interested only in science and objective fact – even in literature there should be facts. I mean literary behaviour means free to psychoanalysis and receptive.
